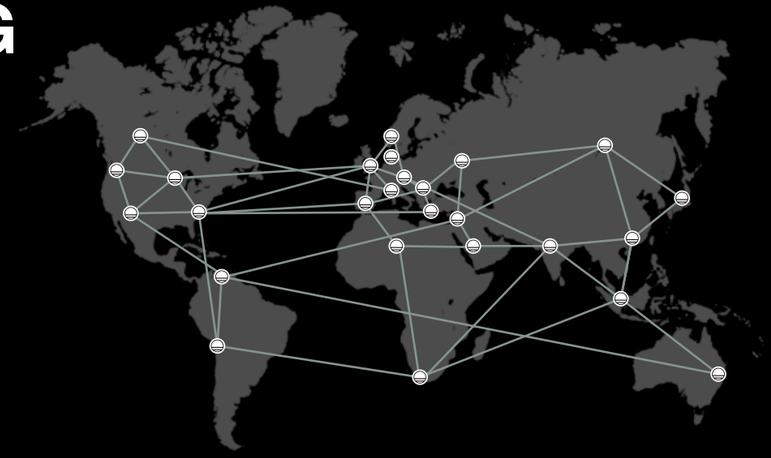
Wild Country Tribe

MOVING INTO THE LIGHT



It's dark when you're in a tunnel. All that matters is getting through, reaching the other side. Away from our usual surroundings, our friends and sources of inspiration, it's possible to lose sight of the bigger picture.

In this digital age, we communicate and interact with each other without being in the same place. Internet applications reduce the need for physical contact. We interact socially, we continue to function as a society, we home train together online, without physically being with each other.

Human beings are "social creatures" – we naturally seek communication and companionship with others. Just look at our physical and emotional need for skin-to-skin contact from the moment we are born.

Currently, we're all deprived of touch and physical contact. Remember shaking hands? Face-to-face conversations? Sharing a cup of tea on a windy outcrop? Exchanging high fives at the crag? Hugging at the top of a route?

Despite all this, as climbers, we're drawn together and connected to one another. We are a network, an international family that spans the globe. We're united by shared moments: moves, problems, routes, frustration, excitement, curiosity, innovation, climbing history and future projects – by the joy and exhilaration of pure climbing experiences. We all know why we climb.
We are a tribe – the Wild Country tribe. Working together,
supporting one another, we can achieve great things.

The tunnel does have an end, we know the clouds will pass,
we are moving into the light.

NEW

Micro offset version of the iconic Friend

Introducing the new Zeros for solid holding power in small offset placements. The ultimate weapon for pin scars and flares. This micro offset version of the iconic Friend has one of the narrowest heads on the market, which means it fits nicely in shallower grooves with its slightly adapted version of the definitive (13.75°) constant camming angle. Engineered with a single axle, stainless steel termination swage, and one of the best expansion ranges going, it comes in 5 sizes for simpler racking and faster selection. We machine the hot-forged, raw-finish, aluminum alloy lobes with a radical design to ensure maximum rated strength values, minimum weight and reduced walking. This is cutting-edge design in practice. Faster, smoother, narrower and lighter to use with a highquality machined finish. Welcome to the new go-to micro offset cam for aid or free climbing.

- **Perfect for small offset placements like pin scars and flares**
- **5 differently colored sizes for simple racking and fast selection**
- **Narrowest heads width on the market**
- **Effective flexible stem, protected by a flexible metal spring**
- **Extendable dyneema sling**
- **Soft, aeronautical aluminum alloy and non-anodized lobes**
- **Great expansion ranges**
- Narrow Head with offset cam lobes
- High-Friction Machined Cam Faces
- Stem Protection With Spring
- Effective Flexible Stem
- Ergonomic Trigger Design
- Strong Lightweight Design
- Ergonomic Thumb Loop
- 10mm Dyneema Extendable Sling

The original is back

Introducing the new Zeros for solid holding power in small placements.
The ultimate weapon for thin cracks, pockets or pin scars on cutting-edge climbs and extreme adventures. This micro version of the iconic Friend has one of the narrowest heads on the market, which means it fits nicely in shallower.
Engineered with a single axle, stainless steel termination swage, and one of the best expansion ranges going, it comes in six sizes for simpler racking and faster selection. We machine the hot-forged, raw-finish, aluminium alloy lobes with a radical design to ensure maximum rated strength values, minimum weight and reduced walking.

- **The strong steel cable that makes up the single flexistem is encased in flexible armoured metal plates, an innovative design that offers enhanced protection and yet still bends effectively to accommodate downward pull in a horizontal placement.**

- **The easy-grab ergonomic thumb loop of our guided trigger system allows confident triggering with minimal flex, essential for accurate placement and removal. The thumb loop is also a boon to aid climbers, offering an easy place to clip etriers, daisies or fifis.**

- **The extendable Dyneema sewn sling gives you more flexibility in use and means you can reduce the number of quick draws on your rack. Its semi-rigid nature also means it stays open for easy access.**

- Available in six sizes from 0,1 to 0,75.

‘Have you got the bag of ‘friends’ Ray?’ the name stuck …

Friends are the most iconic protection ever made. Throughout their 43 year tenure, although the construction has changed, their essence remains the same. At the heart of each iteration has been the definitive 13.75 cam angle; described, refined and developed by Wild Country and proven in thousands of miles of cracks climbed since 1977! This new Friend is no different, built with a twin axle it remains a Friend. At its core our 13.75 constant cam angle provides the axis around which future climbers will place their trust. Robust and reliable this Friend combines classic features and significant additions to create an intriguing mix of old and new. Externally, stylish with significant design flourishes mean the eye is drawn to any number of clever upgrades: hollow axles are stiffer for less weight; wide, skimmed lobes grip better yet are kinder on the rock; new 12mm dyneema is agile and easily extended, saving time and the weight of having to use a quickdraw on each. Internals are based on classic Wild Country foundations; our legendary holding power and the consistency of overlap between units, whilst the twin axle has allowed us to increase the range per unit. Available in sizes 0.4, 0.5, 0.75, 1, 2, 3, and 4.

FRIENDS-SET

This is design at its most practical making the new Friend the only twin axle cam that combines the convenience and comfort of a thumbloop with the speed and utility of an extendable sling. Faster, smoother, lighter in use and superbly finished; our clever combination of key features with innovative engineering makes the new Friend the most complete cam available.

ROCKS

The Rock with it's curved sides is a Wild Country original and revolutionised how we protect routes. Still the backbone of an good rack, the current incarnation is considerably more advanced than it's predecessor and significantly lighter as well. Keeping the original ground-breaking curve, Rocks now come with thinner, lighter sidewalls, a lateral side taper, anodised heads for quick selection and an extended range - with fourteen sizes in all. Revolutionary when launched and still turning heads, the fully featured Rocks range are the benchmark units for the modern climber. Tapered sides anodised colour coding; lighter, thinner sidewalls; fit cracks 7mm to 50mm; available in sets 1-8 and 9-14.

ROCKCENTRICS

A combination of the best ideas behind the trusty old Hexentric with Rock geometry. The Rockcentrics are brilliantly light, easy to use, offering plenty of placement options and come with a colour co-ordinated Dyneema sling that helps keep them firmly wedged once placed.

XENON

Locking carabiners form the backbone of every climber's rack.

Our new Xenon HMS carabiner is made of lightweight aluminium alloy. It has a pear-shaped design with an I-beam profile to offer an improved strength-to-weight ratio. All our carabiners undergo rigorous testing and conform to standards EN 12275 and UIAA121 for climbing and mountaineering equipment to ensure high breaking strength, and can be used in all situations.

We offer the Xenon in a screwgate and tri-lock version both with or without an internal belay wire.

Designed to offer a large gate opening with high open gate strength and a generous rope bearing radius, the Xenon is ideal for rigging stances and can comfortably accommodate two clove hitches. The clean nose design helps prevent knots or gear from snagging. As cross-loaded carabiners have significantly less breaking strength than when loaded lengthwise, we also offer the Xenon HMS in a "belay" version with an internal positioning wire for additional protection to ensure that the carabiner always has correct orientation for maximum breaking strength when belaying.

The Xenon Carabiner is a durable, reliable partner with easy handling for all styles of climbing.

XENON HMS

NEW

A compact and reliable pear-shaped screwgate HMS carabiner for anchor and belay duty.

- Compact pear shape optimised for great handling
- Spacious capacity to manage two clove hitches knots, ideal for belay stations
- Smooth rope running thanks to generous inner surface areas
- Snag-free, clean nose design for easy removal
- Tapers towards nose for easy removal of stuck knots
- Weight & strength optimised, I-beam back
- Smooth-running, high-quality screwgate
- Large gate opening
- High strength rating
- Closure indicator

ASCENT HMS

An adaptable all-rounder the Ascent HMS is a strong, stylish choice. Built for belaying and beyond the ample internals give plenty of room for set ups and the Keylock nose is a super-slick clip. Shaped to maximise gate open and optimise loading on tapes or belay loops it's ergonomic and well thought out. Retaining a round bar at the rope end the smooth surface works well for rigging or with a Munter hitch. Keylock nose Full size Hot forged 12mm round bar High strength 7075 extruded thimble.

ELECTRON

The Electron is a great-value, versatile carabiner that does the business for both sport and trad rock climbing. It has a wide gate and distinctive, ergonomic shape that supports smooth clipping, while the keylock nose prevents snagging. The hot forged solid gate construction and internal geometry provide lightweight strength, whilst minimising cross loading. The bent gate is engineered for the rope-side of a quickdraw. Covers all bases – from sport projects to multi-pitch alpine.

- Ergonomic design for superb handling and smooth action
- Keylock nose prevents snagging
- Hot forged
- Wide opening for easy clipping

PROTON

"Sports specific and impeccably designed, the radical Proton has received plaudits across the board. Distinct hot forged back and gates have been carefully thought out to create an ergonomic pair of biners engineered around our new variable width webbing to make an awesome package. Built for smooth clipping and stripping, the Proton enhances and redefines this integral part of the sports climbing experience. A clean hanging draw that's perfectly balanced, with clip and rope end defined, this is a formidable combination and essential kit for any sports climber. Quickdraws available in 12, 17 and 25cm on variable width webbing with new 'vice'.

ASTRO

The Astro retains many of the features that run through the Helium concept, creating a ‘biner that’s exceptionally strong, compact and lightweight. Importantly, the Astro retains a practical size and an overriding ability to be used in all circumstances, which is an essential part of karabiner design that is sometimes forgotten in the race to shed weight. Features: Superlight, ‘I beam’ back, Hot forged, Tech Wire gate, Hooded nose.

MOSQUITO TESTING

by Siebe Vanhee

When I choose a harness, I first select based on how it feels; I want to feel like I am climbing freely without any restrictions. But I still like to feel my harness around my waist and legs, just tight enough to assure me of comfort and safety without restricting fluid movement. But of course, it needs to comfortably distribute the weight across the surface wherever it contacts my body. Next, it has to be practical for all of my climbing styles, from big walls in Patagonia to sport routes in Spain, so I instinctually check the gear loop design.

They have to be quickly accessible, not too much in the front and not too far back. Not only does it need four gear loops, but the front ones have to be stiff to allow unclipping quickdraws or gear quickly. And last but maybe most important to a lightweight design, the leg loops need to be the right size combined with the waist belt, which is always tricky because we all have different bodies. I still remember arriving in Orco Valley, meeting the product team and being handed the Mosquito prototype. I remember my first impression very well, “This is it! This is the harness I want to use on all my climbs, even the big walls!” I thought. But I was just getting started. With great weather in the forecast, I was sent out to climb stellar lines, put the harness through its paces, and shoot photos with Federico Ravassard (Rava), a photographer who knows the area well.

Days later, during a memorably big Italian dinner, I was very excited to report on the Mosquito harness. My first impression did not change after trying it on slabs, crack, face, sport, and trad routes: I loved the minimal design. Being able to move freely is a priority, and this harness offers me the proper support to do so.

ELECTRON SPORT DRAW

A robust, versatile quickdraw that covers all bases.

If you had to choose just one draw for your rack, we would recommend our great-value Electron Sport. Why? Because it's strong, durable and easy to clip, strip and grab.

The asymmetrically shaped Electron carabiners have a distinctive, ergonomic shape and a wide gate for easier clipping, while their keylock nose promotes snag-free clipping. To make them lighter without compromising strength, we use a hot-forged construction with an I beam back. And the contrasting, classic Wild Country tangerine and grey colours help you to always identify the right ends for rope and protection.

The solid, robust straight gate design gives improved handling and a controlled clipping action, while the concave design of the bent gate at the rope end helps guide the rope into the carabiner. And the ergonomic, tapered shape of the thick, durable nylon webbing sling makes it easier to grab and haul when working routes.

The Electron Sport Draw will go with you on any climb and deliver on everything from roadside sport crags to working projects or long, multi-pitch alpine routes. Available in two lengths: 12cm and 17cm.

- **Ergonomic design for superb handling and smooth action**
- **Hot forged I beam construction**
- **Keylock nose prevents snagging**
- **Wide opening for easy clipping**
- **Modified vari-width nylon webbing now easier to grab**
- **'Vice' sling protector ensures rope end biner is correctly orientated**
- **Available in two lengths: 12cm and 17cm**
- **Six pack available with 12cm slings**

WILDWIRE ALPINE QUICKDRAW

FAIR WEAR

The Wild Country Wildwire Alpine Draw features superlight, hot forged, Wildwire biners mounted on an extendable 60 cm Dyneema sling. The Wildwire carabiner has an I-Beam construction which allows it to be lighter, without compromising on strength. The smooth-action wire gate is double kinked to provide an easier grip when clipping. The lightweight, flexible 10 mm Dyneema sling is weather and abrasion resistant and has higher strength-to-weight ratio than standard nylon webbing. Its narrow diameter makes it ideal for use in threads, spike placements and extending protection.

- **Ergonomic design for superb handling and smooth action**
- **Hot forged I beam construction**
- **Wire gate carabiners for maximum weight saving**
- **60cm Dyneema sling, 10mm, 22kN Strength**
- **'Vice' sling protector ensures rope end biner is correctly orientated**
- **Biner: Longitudinal: 27kN / Side: 8kN / Open: 9kN Opening: 26mm**

REVO

Makes belaying simple and safe: the REVO.

The only automatically locking belay device which: Has a completely panic-proof locking mechanism.

The REVO has no method of over-riding the locking mechanism, during belaying, or when lowering a climber. Is bi-directional, the locking function works regardless of the rope direction. Has an intuitive belaying method, which requires no changes to standard belaying technique. Has no need for a specific locking karabiner. All of these USP's contribute to make the REVO the safest belay device available.

The REVO is the first Bi-Directional assisted locking belay device. Its function is independent from the loading orientation of the rope, thus eliminating one of the most common causes of belay related accidents. Irrespective of the situation, an uncontrolled descent will cause the inertia reel to activate, grip the rope and arrest the fall. The innovative panic-proof locking mechanism (pat. pending) removes the necessity for a handle to unlock the system when lowering the climber. The device is intuitive to use like a traditional belay plate and is thus suited for both the novice and expert alike. The clever combination of these features makes the Revo the safest belay device on the market.

The only automatically locking belay device which: has a completely panic-proof locking mechanism. The Revo has no method of over-riding the locking mechanism, during belaying, or when lowering a climber. Is bi-directional, the locking function works regardless of the rope orientation.Has an intuitive belaying method, which requires no changes to standard belaying technique. WILDCOUNTRY

PRO GUIDE LITE

Our advanced belay tool demonstrates engineering excellence and this remarkably lightweight device has been trimmed of all excess. Its deep ribbed grooves handle a vast range of ropes from 7.7mm alpine cords upwards. Operated in ‘guide mode’, the pro guide lite is perfect for bringing up twin followers and locks perfectly with every fall. With a larger ‘release slot’, suitable for a karabiner, the tool is simple to release under load. For use in mountain and crag environments by alpinists and adventure climbers, the Pro Guide Lite is ergonomic, smooth and simple to operate.

- Enhanced nose design
- New lightweight forging saves weight
- Guide mode
- Compatible karabiner release function
- Efficient breaking slots
- Flexible cable leash
- Karabiner release function
- New oversize belay karabiner hole enables complete karabiner roatation
- Weight 70 gmsg / 2,68 oz

PRO LITE

Light, intuitive and smooth running, the Pro Lite is simple, secure and efficient. Revised internals and wide deep V grooves give control across a wide range of ropes and a flat base plate reduces grab when rope is needed quickly. Working equally well belaying or abseiling the Pro Lite is a superb value for money option for the all-round climber.

- Lightweight design
- Efficient braking slots
- Flexible cable leash

WILDCOUNTRY

ROPEMAN 1

"The original Ropeman has been a bestseller for over 10 years and is a benchmark mountain product. The Ropeman 1 has an alloy cam that keeps weight down. It is easy to place on ropes with a simple action to open the sprung sideplates. The flat cam profile is easy to release, even under light loads. The Ropeman 1 has recently been upgraded with forged sideplates for increased strength, less weight and an even better fit. Ideal for self rescue, prussiking, pulleys and mouflage, the list of uses for these small but perfectly formed devices is endless.

- Hot forged side plates
- Alloy cam
- High strength stainless steal axel
- Stainless steal cable leash
- Alloy 7075 T6, >10mm. 3 Sigma rated, CE EN567, UIAA 126.

ROPEMAN 2

Built with a stainless steel cam, the Ropeman 2 works with a wide range of rope diameters and has become 'standard issue' for many mountaineering and crag activities. Recent upgrades include forged sideplates, making the product lighter and providing a better internal radius for smooth operation across a broader range of karabiners. From self-rescue and cliff rescue to mouflage and more, these mini-marvels have been well proven in the field.

- Hot forged side plates
- Stainless steel cam
- High strength stainless steal axel
- Stainless steal cable leash

PRO KEY WITH LEASH

Adaptable and easy to use, this slick nut tool is well thought out. Thin and accurate, the tip of the Pro Key is precision ground for rocks removal even in tiny slots; whilst at the opposite end there's a wide, flat surface for a firm and painless push with the palm.

Large holes along the length of the key keep weight to a minimum and a wire gate allows a direct clip to the harness.

It is provided with an extendable leash and clip that means you're safe from dropping it in tight spots.

DYNEEMA SLING 10MM

FAIR WEAR

This lightweight 10 mm sling is made from high-quality, high-strength weather and abrasion-resistant Dyneema, which has a higher strength-to-weight ratio than standard nylon webbing.

The narrow diameter makes it ideal for use in threads, spike placements extending anchor points or belay constructions.

- **Ergonomic design for superb handling and smooth action**
- **Hot forged I beam construction**

MOVEMENT

FAIR WEAR NEW

Solid all-rounder : the Movement.

If you are only buying one harness then it needs to be a solid all-rounder to cover all bases. The Wild Country Movement harness is designed to ensure good weight distribution across its wide waist belt thanks to its ergonomically-shaped padded webbing construction.

It gives good comfort for: moving around, walking or standing at the base of the crag; hanging in – whether dogging while on lead or resting while top-roping; and belaying in – including for longer periods. The wide and well-padded leg loops distribute the load with their dual webbing straps and are quick and easy to adjust thanks to the dual buckles so that you can customise them according to the number of layers you're wearing or for different leg sizes. Both the waist belt and leg loops offer effective moisture transport for summer use.

There are four gear loops and a small rear accessory loop for your chalk bag or shoes.

A versatile, durable, fully adjustable 4-buckle, all-round harness for rock climbing, mountaineering and via ferrata.

- Versatility for all conditions – four buckles for maximum adjustability at waist and legs
- Comfortable design and padding
- Durable and robust ripstop material
- Dual slide block, waist belt buckles
- Adjustable leg loops
- Dual slide block, leg buckles
- Two spacious rigid gear loops at front for easy clipping
- Two spacious gear loops at back, soft for comfortable fit with a backpack
- Available in two sizes
- Supplied with protective storage bag

MOVEMENT JUNIOR

FAIR WEAR NEW

Solid all-rounder : the Movement Junior.

The Movement Junior has a simple and lightweight design that balances comfort, weight saving, and simplicity – making it an excellent choice for a kid's sit harness.

The wide waist belt with an ergonomically-shaped padded webbing construction is designed to ensure good weight distribution and thanks to the adjustable waist belt and leg loops – both with dual slide block buckles – this is a harness that is quick and easy to adjust. Both the waist belt and leg loops offer effective moisture transport for summer use.

There are two gear loops that stand out for easy clipping. Both leg loops have clear indicators on the inside for easy identification to see which foot goes where – putting the harness is more intuitive. The belay loop/tie-in points are set high to keep young climbers upright, while the rear elastic risers keep the leg loops up in place. In addition, the distinctive yellow tie-in loop helps promote good tying-in technique and also makes for easier partner checking before starting each pitch.

A comfortable and durable, fully-adjustable 4-buckle harness for ambitious young climbers.

- Full versatility– four buckles for maximum adjustability at waist and legs
- Comfortable design and padding
- Durable and robust ripstop material
- Dual slide block, waist belt buckles
- Adjustable leg loops
- Dual slide block, leg buckles
- Two spacious rigid gear loops for easy clipping
- Yellow tie-in loop for easy, safe and secure tie-in recognition
- Supplied with protective storage bag
- Leg loops are marked on the inside for easy left/right recognition

MOSQUITO

FAIR WEAR

Superlight, superfly : the Mosquito.

is an extremely lightweight, minimalistic, high-end sport climbing harness that weighs just 220 grams.

This is the lightest harness Wild Country has ever made. Engineered specifically for sport climbing, its precise fit delivers super-lightweight comfort, agility and freedom of movement. The advanced, lightweight, laminated waistbelt construction features internal load-bearing webbing that distributes the load evenly across the entire harness structure, combined with super-light mesh padding and a robust, fast-drying and abrasion-resistant covering with seamless edges that is soft and smooth next to the skin. This harness is built specifically with freedom of movement in mind. Its sleek, stripped-down construction adapts to your body for full, unhindered, flexibility as you climb. An important stand-out safety feature is the wear indicator on the reinforced lower tie-in point – a feature used by Wild Country since the 1990s. To clearly indicate when it is time to retire the harness, it has red threads that only become visible after excessive wear and abrasion.

The Mosquito is equipped with lightweight gear loops: two rigid front loops, two softer back loops, to prevent pressure points when climbing with a pack. All gear loops are designed specifically to hold your gear and draws away from the harness for smoother retrieval. There is also a decent-sized rear haul loop that also doubles as a chalk bag attachment point.

With a self-locking, aluminium slide block buckle on the waistbelt to ensure a secure and comfortable fit plus lightweight, supportive leg loops with elasticated risers. The Mosquito packs down small and comes in a stylish, two-tone black and white design with a classic Wild Country tangerine orange buckle.

- Ultra-lightweight: 220g (size XS)
- Lightweight, smooth, abrasion-resistant, ripstop fabric
- Engineered for full freedom of movement and to evenly disperse load
- Integrated wear indicator at lower tie-in point
- Lightweight aluminium buckle for secure and comfortable fit
- Four lightweight gear loops: two rigid front gear loops, two flexible, low-profile rear gear loops that won't interfere with a pack
- Fixed leg loops with elasticated risers
- Rear haul/ gear loop
- Supplied with a lightweight protective storage bag
- Unisex design

SYNCRO

FAIR WEAR

A burly big wall harness that will go anywhere.

The super-comfortable Wild Country Syncro is ideal for long days multi-pitch climbing, aid climbing or guiding.

We took the best elements of the old Syncro, our fully-featured big capacity multi-pitch harness, and then went back to the drawing board. The result is a completely new construction that offers superior versatility, comfort, support and ventilation with maximum gear carrying capacity for long lines and big wall projects – and all at a reasonable weight. Made from our new frame construction with super comfortable padding, and matched with robust, abrasion-resistant Dura-Weave covering, the Syncro offers a proven combination of durability, flexibility and weight distribution for hanging belays and long days without uncomfortable pressure points. We also give the reinforced lower tie-in point a wear indicator. It has red threads that only become visible after excessive wear and abrasion, to show when it is time to replace the harness. A further important stand-out feature is the ventilated Air Mesh zone for increased breathability in the lumbar region.

The two beefy slide block buckles on the 25 mm webbing waistbelt and on the 20mm webbing leg loops can be fully opened to make the harness easier to put on when wearing skis or crampons. For each of the four buckles you get elastic strap retainers to prevent loose ends.

The Syncro features a total of six gear loops with two rigid front loops and four softer loops at the back for multiple racking options and uncluttered organisation. The gear loops are also specifically designed for easy gear retrieval and its twin buckles at the waist allow you to keep everything centred, no matter how many layers you're wearing. And there are two slots for carrying tool or ice screw holders and a decent-sized rear haul loop too.

- Maximum comfort when hanging: well-cushioned, broad waistbelt distributes load over entire surface area
- Engineered for balanced weight distribution and maximum stability, no matter how big your rack
- Ergonomically-shaped, adjustable leg loops and waistbelt remain comfortable while moving
- Dual slide block, aluminium waist buckles allow tie-in point to be centred and equalize gear loops
- Dual slide block, aluminium leg buckles for full adjustment, including over winter layers
- Ventilated Air Mesh zone for increased breathability at the lumbar region
- Integrated wear indicator at lower tie-inpoint
- Six gear loops: two rigid front gear loops, four flexible rear gear loops for organised racking, optimum separation and to prevent bunching
- Two attachment points for ice screw/tool holders
- Rear haul/ gear loop
- Unisex design

STAMINA GEAR BAG

A big-capacity climbing pack for sport, trad and the gym that's easy to pack, unpack, and carry.

Our stylish Stamina Gear Bag is a top-loader with 41 litres of storage and a full side zip that opens up wide for quick and easy access. Its abrasion-resistant ripstop fabric will cope with plenty of punishment. The main compartment comfortably handles a double rack, harness, helmet, shoes, two half ropes or an 80-metre rope and still has plenty of space for spare clothes, food and drinks.

Simply rock up, zip open the practical, wide-opening system, spread out the detachable tarp to create an organised space to sort the rope and start racking your gear. When it's time to move on or head back out, the roll-top closure system and compression straps make moving between pitches and packing up faster and more efficient. In addition, you also have the option to simply lash your rope to the top of the pack and secure it with the integrated buckle strap.

The foam back panel, ergonomically designed, padded shoulder straps and removable padded waistbelt and chest strap ensure a comfortable carry, even with heavy loads, pointy friends and steep approaches, while the volume-adjust compression straps ensure a stable carry even when the pack is not full. And there is ample additional storage, including a large zipped guidebook pocket and a secure outer zipped pocket for your valuables.

The Stamina is the go-to cragging pack that will hold everything you throw in it with room to spare.

- Large, detachable rope tarp included
- Rope strap with aluminium buckle on top
- Roll-top closure
- Volume-adjust compression straps
- Abrasion-resistant ripstop fabric
- Full zipper opening for easy access
- External pocket for valuables
- EVA foam back panel
- Reinforced grab handles
- Large pocket for guidebooks, topos etc.
- Ergonomic, padded shoulder straps
- Removable padded waist belt
- Removable, adjustable chest regulation

Train hard. Climb hard. The Session 2 Tee is a technical men's T-shirt for climbers looking to hit their targets and push their grades. Made of cool-wearing, super soft and stretchy 100% organic cotton and featuring a large graphic print.

- **100% organic cotton – naturally soft and stretchy**
- **Engineered with a slim, athletic performance fit**
- **High reach raglan sleeve construction for unrestricted arm-lift and maximum range of movement**
- **Underarm inserts in lightweight cotton mesh for additional breathability**
- **Cut slightly longer at the back**
- **Distinctive cutlines and solid colour blocking**
- **Wild Country logo print**

SPOTTER M SHIRT

/095236

Tell your mates, grab your mat, grab the guidebook and don't forget your rock shoes.

It's time to hit the road.

2100 WHIN YELLOW CHECK

FRONT

Introducing the summer-ready Spotter Long Sleeve Shirt for men. It has a soft-point collar, single chest pocket, a classic, casual silhouette and natural tartan check that makes it stylish enough to fit in anywhere, while its technical features mean that you have no excuses for not climbing well in it.

Technical features, what technical features? Well, the regular cut is designed specifically to deliver comfort as you move thanks to the rear shoulder yoke with back pleat and special gusseted underarm design. The lightweight twill-weave cotton has extra elastane content for additional freedom of movement and stretch on wide or high-reaching moves. The killer detail though, might be its concealed sleeve adjustment with hidden webbing loop inside and button outside – you know, for when you want to roll up your sleeves and lock them in place for hard moves on hot days.

5010 SEAWEED CHECK

FRONT

- **Soft, durable and lightweight cotton and elastane**
- **Classic, timeless, casual, button-down style**
- **Natural five-tone tartan plaid check**
- **Regular fit, cut for athletic movement**
- **Left chest pocket with contrasting tonal check and discrete logo**
- **Special gusseted underarm design for freedom of movement**
- **Rear shoulder yoke with back pleat for clean fit and improved freedom of movement**
- **Full button front**
- **Curved hem**
- **Discrete logo and brand roundel**

WOMAN BLOG

by Anna Hazelnutt

Climbing above impostor syndrome

Impostor syndrome impacts women, and especially women with overlapping marginalized identities regarding gender, sex, race, ethnicity, culture, class, and ableness, the most. It's harder to feel confident and worthy when we don't see many people like us in our fields. Additionally, adventure sports are notoriously intimidating and elitist, with histories dominated by men due to barriers to entry. Lack of inclusion in concert with a significant barrier to entry makes it easy to see how this phenomenon has influenced the women of climbing. I encourage women to look introspectively at their relationship with the climbing community and that the climbing community as a whole looks outwards. Together, we can cultivate a positive atmosphere by elevating one another and bringing awareness to the fact that there are still so many hoops that women, especially women of color, have to jump through while pursuing a hobby like rock climbing. Next, we need to highlight examples of women from all backgrounds who have succeeded in pushing past these obstacles so that others can follow in their footsteps. Bit by bit – or as they say in Catalunya, poc a poc – we are getting there.

There were no female mentors for my mother's generation, and only a handful of female role models for myself in the small area I lived in and the local gym I frequented. Now, there are new organizations, Instagram pages, festivals, youth programs, and opportunities that have emerged to encourage inclusivity in outdoor spaces. I am encouraged that there will be plenty of examples for the next generations of women to come, and that no matter who you are or where you come from, you can still be a climber.

So, grab your girlfriends and be a part of this movement for change!

MOVEMENT W PANTS

/095147

The game changer in the quest for the perfect climbing pant.

We think we might just have a game changer in the quest for the perfect women's climbing pant. The Movement Pant has a design, material, patterning and features that are all 100% engineered for maximum freedom of movement on rock.

Radical tailored fit
What really sets this pant apart is the 'movement construction block' developed by our designers which starts from the full split position and then drapes and builds the pant around the body. The radically different cutlines allow far greater flexibility for wide bridging, high rockovers or overhead heel hooks. You get absolutely zero constraint. A gusset crotch now comes as standard on most climbing pants. We take it a step further with our curved diamond gusset that offers even greater flexibility. In addition, the articulated knee further adds to the freedom of movement. And the tailored leg tapers with a unique circulating seam down to the ankle for a clear view of your feet and precise footwork – with no need for a drawcord.

Climbing-specific features
At the waist, the clean fully-adjustable integrated slimline webbing belt fits unnoticed under your harness. It's secured by a robust simple and effective metal hook and webbing loop for easy adjustment and accommodates a broad range of waist sizes. We've included low-set side pockets at the hips and a surprisingly generous slanted back pocket that's cunningly concealed by the cutlines. With subtle colourways and distinctive, but low-key branding and our Wild Country logo at the thigh and ankle.

THW STANDARDS

THE THREE SIGMA RATING SYSTEM is a method of Statistical Quality Control (SQC) which we use to describe, analyse, and control the rated strengths of our products. For each batch produced, a statistically representative sample is taken and tested to destruction in accordance with the relevant European Standard for that product and/or our own approved internal Quality Assurance Procedures.
These procedures are an integral part of our Quality Assurance System. From the data obtained from destruction testing, the average (or mean) and sample standard deviation (which is a measure of variance based upon the results obtained) is calculated. 3õ is three times the sample standard deviation. When 3õ is deducted from the mean result obtained, we can predict the spread of results which would be obtained if we were to destroy the entire batch (which is why we sample only!). We monitor this data closely from batch to batch to ensure that the rated strength (as marked on the product) is always less than the mean minus three times the sample standard deviation. This ensures that the minimum breaking strength for all products is consistently higher than the rated strength as marked on the product.

UIAA SAFETY LABEL – The UIAA Safety Label can be awarded for mountaineering and climbing equipment that meets the requirements of the relevant UIAA standard. In order to prevent unnecessary multiplicity of standards, the UIAA standards are based on the European standards (EN standards, also called CEN standards). The EN standards, in turn, are based on the former UIAA standards, which were the first standards for mountaineering and climbing equipment in the world. The present UIAA standards may have higher and/or additional requirements above those in the
EN standards.

CE CERTIFICATION – Where required by law (European Union Directive 89/686/EEC – for Personal Protective Equipment).

WARNING – In accordance with EU Directive 89/686/EC Wild Country Ltd. supplies detailed instructions with all its products and recommends that the user reads and understands these instructions before use. If you are in doubt, require further advice or would like a copy of the instructions for any Wild Country product, you should contact us at the address printed in this Work Book. It is the user’s responsibility at all times to ensure that he or she understands the correct and safe use of any equipment supplied by Wild Country Ltd., uses it only for the purposes for which it is designed and practises all proper safety procedures. The manufacturer or supplier will not accept any responsibility for damage, injury or death resulting from misuse.

GUARANTEES – Wild Country guarantees all of its products from new against defects in workmanship or materials, unless the product has been worn out, misused, or abused, as determined by our examination. Wild Country will repair or replace any product as appropriate. This guarantee is in addition to your statutory rights which remain unaffected. Wild Country Ltd. reserves the right to modify without notice the design and specifications of products described in this workbook. All weights, dimensions & sizing specifications where quoted are nominal.

MATERIAL - APPAREL TECHNICAL

DURASTRETCH

DURASTRETCH is our proprietary abrasion-resistant fabric. We use it to make our hard wearing pants and shorts, and also on inserts on various garments, reinforcing knee, forearms. It is also lightweight and surprisingly comfortable.

DURASTRETCH fabrics are constructed on nylon (polyamide) with a high stretch content. They are lightweight, comfortable yet hardwearing and highly abrasion-resistant.

DURASTRETCH is available in a high range of 2-way and 4-way stretch versions. It is breathable and can be treated with a DWR finish to make it water-repellent. The DURASTRETCH fabrics we use in this collection are suitable for four-season use as their inner structure quickly wicks sweat away and drys easy.

DURASTRETCH fabrics make high-quality pure climbing apparel.

BENEFITS:

- Abrasion - resistant

- 2-Way stretch and 4-way stretch

- Breathable

- Light and versatiles

- Ideal for climbing where abrasion is a factor

drirelease®

drirelease® technology is an eco-friendly solution to keep you cool, dry and comfortable during your climbing session.

Fabrics made with drirelease® technology do not rely on chemicals of any kind to alter their fibers, performance is permanent.

drirelease® is a patented combination of hydrophilic & hydrophobic fibers allowing them to engage with moisture naturally to dramatically improve how moisture is pulled away from the skin and released into the air.

SOCIAL AND ENVIRONMENTAL SUSTAINABILITY

WILD COUNTRY
IS A PROUD
FAIR WEAR FOUNDATION

LEADER

WWW.FAIRWEAR.ORG

FAIR WEAR FOUNDATION MEMBER

Since 2013, we have been members of the Fair Wear Foundation (FWF) and for the fourth year in a row we have achieved the prestigious Leader status. This independent non-profit organization assists us to work towards ensuring that all sewing factories comply with the stringest FWF Code of Labor Practice and thus fulfill the highest standards for fair working conditions.

ETHICAL SOURCING

Our Code of Conduct (CoC) is our prerequisite for the collaboration with partners along our supply chain. We decided to adopt a management system that allows us to regularly verify that the principles contained in this document are respected by and collaboratively implemented with our partners. Our main partner to work towards fair working conditions in our supply chain is the Fair Wear Foundation.To learn more about FWF, watch the video below or visit www.fairwear.org.

To know more, check the latest Brand Performance Check Report on our website.

PFC FREE

PFC.free DURABLE WATER REPELLENTS (DWR)

PFCs are per-and polyfluorinated chemicals that are often used in outdoor gear due to the extreme water-, dirt-, and oil-repellent functions while at the same time ensuring breathability. Until a few years ago, these chemicals were the most broadly used. Only recently studies found about their persistence in the environment and their potential to cause health hazards. We replaced all long-chain PFOAs, also known as C8 chemicals, with short chein C6 PFCs (which are considered to be less resistant to environmental degradation) in all garment. As a result all these products are PFOA-free and at a minimum, C6-based DWR or PFC-free treatments are used. In WILDCOUNTRIEs technical styles this performance is crucial to prevent fabric saturation and protect users to stay dry and warm in all conditions. However the use of C6s is only seen as an interim stage until comparable alternatives that ensure the same performance are available on the market. We are continuously investing to further reduce the use of C6-chemicals in our fabrics and increase the number of PFC-free products significantly with our compromising on our user-safety performance.

100% ORGANIC COTTON

ORGANIC COTTON

Cotton clothing provides you with a wide range of next to skin luxuries; soft, comfortable, and hypoallergenic not to mention the colorful patterns and designs that represent who you are. Organic cotton helps ensure these benefits are not lost to a negative environmental impact. The production of Organic Cotton is eco-friendly and utilizes natural fertilization through crop rotation and organic composts like manure. It also eliminates the use of pesticides and toxic dyes which run into the groundwater. And let's not forget the little guy; organic cotton benefits small farmers by providing an opportunity to sell their crops more easily. So wrap yourself in it, sweat in it, wear it to the pub; whatever luxury you take in wearing cotton take luxury in organic cotton.
