SWISS  MADE

W21/22 - NA

TRACK YOUR SKI

CUTTING THE LR

HONORÉ BECKER

The first step consists of cutting the large roll (LR) into small rolls (SR). The number of SRs and their width varies depending on the type of skin desired. Once the SR is created, these are assembled end-to-end to facilitate the operations that follow (a step also called placing into trays).

GLIDAGE

SECRET

The SRs are rolled out and form a long strip to which treatment, made in POMOCA, is applied on the skin. The purpose of the glidage is to improve the gliding of the skin.

FRONT STITCHING

FLORINDA LAVANDEIRA

Once the skin is finished, you still need to sew the front fixings. Sewing varies according to the type of skins.

LASER

SRDJAN MARKOVIC

The rolls are unwound on the table of the laser before being cut. The cutting of the skin varies according to the desired dimensions (length, width, shape).

REAR STITCHING

ISABEL MALDONADO

Once the skin is finished, you still need to sew the rear fixings. Sewing varies according to the type of skins.

PACKAGING

ALBA LUZ AGUIAR

As its name suggests, the packaging consists in putting the skin in a carton and attaching different utensils (cutter, operating instructions, conservation bag etc.).

MARKING**AYMERIC TROSSAT**

The SRs are also rolled out and form a long strip on which the glue side of the skin is marked in ink with the material used as well as the mark.

GLUING**AURÉLIEN DESOUBRY**

Here again, the SR is rolled out and forms a long strip on the underside of the skin which has two different layers of glue

SPLITTING**FLORINDA LAVANDEIRA**

To facilitate the task of the laser, the large trays are again transformed into small rolls (SR) from 30 m to 50 m. The skins are treated and are now ready to be cut.

PACKING**NATHALIE SALTON**

The skins are ready, all we need to do now is send them to various addresses.

OEM PARTNERS

SAIMAA SEALS

POMOCA, in coordination with EOCA and the Finnish Association of Nature Conservation is supporting the protection of the Saimaa Ringed Seal in Lake Saimaa, Finland. After being close to extinction in the 50's, the Saimaa seal is still in danger today. Their main threat comes from non-approved fishing nets and traps (killing 50% of the baby seals) in addition to the ever-increasing environmental toxins. Today, the total population is estimated to be only 300 seals.

SKIN BELTS

At POMOCA we do everything possible to reduce waste through more optimized production technologies. Additionally, we like to give a 'second life' to our excess trimmed material. We have established a partnership with Skinalp of the Aosta Valley, Italy. Skinalp produces unique and functional apparel accessories from the excess plush material of our skins!

Do you want a Skinalp belt? Order it at www.skinalp.com. Proceeds go to support the Sanonani House in Nepal. (www.sanonani.house).

PROTECT OUR WINTERS!

POMOCA is proud of the partnership with Protect Our Winters Switzerland (POW). Since 2017 in Switzerland, POW mobilizes the outdoor community against climate change. POW is a community made up of athletes, activists and dedicated enterprises working on solutions to bring about change to society, the industry and politics.

100% HYDRO-ELECTRIC ENERGY

Beginning January 1, 2017, the entire POMOCA factory will be running with 100% Swiss Hydroelectric Energy. All the energy consumed at POMOCA (heating, production, offices, etc.) will be ecological.

EQUAL OPPORTUNITY EMPLOYER

POMOCA cooperates with 3 people with disabilities workshops in Switzerland, France and Spain for assembling processes giving work to an equivalent of 3 full-time jobs.

FLUORO-FREE SKINS

EVER
DRY

3.0

FLUOR
FREE

In 2015 POMOCA switched its entire production to PFOA-free skins. Wishing to push even further, POMOCA has now developed the first skin treatment completely free of all perfluorocarbons (PFCs). The Climb Pro Mohair for 2017 will be the first skin in the market using this new waterproofing treatment: the EVERDRY 3.0. With this change, POMOCA advances beyond the most demanding national regulations on textile treatments and leads the way towards an eco-friendly skin.

BAABUK

To give his waste a second life, POMOCA has partnered with the innovative start-up Baabuk. An up-and-coming Swiss company who offers felted wool shoes inspired by old traditions. Together they upcycled the cuttings into durable and versatile bottoms for a limited series of fun, stylish and durable slippers.

Jérémie Heitz

“POMOCA reflects the ideal partner to quickly reach the mountains that I want to ski.”

TECHNOLOGIES

WHAT IS A SKIN?

1. A PLUSH WITH ANGLED FIBERS...

The plush offers GRIP and GLIDE to the skin. These characteristics vary depending on the material used (nylon, mixed or mohair) and the way the fibers are woven (thicker or thinner; longer or shorter; more or less angled). Normally, a skin that GLIDES more, GRIPS less.

2. ...SUBJECT TO VARIOUS TECHNICAL TREATMENTS...

These treatments provide waterproofing for fibers, which is key to preventing snow clumps from forming. Wet fibers can freeze with a change in temperature. When the fibers freeze they attract snow which sticks to the skin, forming clumps. They also give the color to the skins and help with fixing the fibers to the angle/backing, which is why it is important for durability and GLIDE/GRIP.

3. ...WITH A LINING...

The lining prevents water transfer from the plush to the adhesive. A lining that is not waterproof causes dampness on the adhesive and reduces its tack (stickiness). The adhesive could come away from the skin and stick to the ski. A quality lining guarantees the correct functioning of the adhesive and also increases resistance to the skin tearing.

3. ...WITH A LINING...

The adhesive attaches the skin to the ski. In cold and wet conditions, adhesion may be difficult: in general, the adhesives do not perform well in water or cold, as it is harder for them to stick in a wet environment (mist or heat in spring/damp snow) or in the cold.

The technologies of POMOCA are based on a deep understanding of snow, enhanced by research and development. Textile engineers and chemists work hand-in-hand with mountain guides and athletes. Together they modify the materials' contact surfaces and thus push the effectiveness of climbing skins to unimaginable heights.

HYDROPHOBIC TREATMENT

EVER
DRY

EVER DRY 3.0 represents our largest step forward with respect to the environment: this is the first skin treatment on the market which does not contain any perfluorocarbon, a chemical found to be harmful to the environment. In 2017, EVER DRY 3.0 will be used to treat all Climb Pro Mohair skins, making this the first PFC-Free skin!

GRIP

GRIP

Good climbing grip is very important. So POMOCA has developed a combination of materials and weaving techniques to combine glide and durability with gripping power. Proper alignment and the fiber attachment systems make POMOCA skins very stable under all conditions and for the entire life of the skin.

MEMBRANE

SSV

Thanks to the thinner layers, POMOCA has succeeded in making its classical SAFER SKIN membrane lighter. SAFER SKIN LIGHT (SSL) is 12% lighter which means 150g/m² less. SSL makes the pair of skins about 60-75g lighter while remaining 100% waterproof.

SSUL

Safer Skin Ultra Light (SSUL) is a membrane combining optimal lightness with the durability of the Safer Skin Light. With the SSUL, POMOCA not only reduces the weight but also the size of the skin while maintaining the same level of performance.

SSL

POMOCA has succeeded in making its classical SAFER SKIN membrane lighter. Thanks to finer layers in the membrane, SAFER SKIN LIGHT is 12% lighter (150g/m² less). While remaining 100% waterproof, and with slightly less wear resistance, SAFER SKIN LIGHT makes the pair of skins about 60-75g lighter.

GLIDE

GLIDE

Thanks to the exclusive GLIDE process, ski tourers get extra glide with less effort. This treatment, which is applied at the end of the production process and to the entire length of the fiber, makes the skin glide and resist moisture more effectively. Skins with GLIDE offer an effective process for the entire life of the skin, and unique anti-glopping performance.

GLIDE
PRO

POMOCA has developed a new GLIDE process. With the same application technology, but a new, very high-quality GLIDE PRO product, skins with GLIDE PRO offer exceptional extra glide, which is essential for high-level competitors.

TOURING / FREERIDE

01 Z-HOOK FOR CLICK LOCK

This hook is attached with a simple click on the Click Lock, and is designed for skis with a hole at the tip (e.g., Fischer, K2, La Sportiva).

Art.- Nr. 10-0007181906

02 CLICK LOCK

The new Click Lock is the simple solution to attach the skins to any tip ski, from the narrowest light ski to the widest free ride ski. With 2 simple "clicks" you can change the size of your buckle to fit any tip form. Simple and resistant.

Buckle sizes:
65, 75, 85, 95, 105 mm.

Art.- Nr. 10-0007181912
1 pair (sold in blister)

03 BACK FIX TAIL STRAP

POMOCA's renowned Back Fix rear attachment, now improved with an elastic strap for maintaining tension. It is easily attached to any skin using four rivets.

Art.- Nr. 10-0007160113

04 TWIN TIP TAIL HOOK

The rear hook designed for Twin Tip skis. Remove the traditional Back Fix hook and slide the strap into this hook. Your skin will be ready for hooking to a Twin Tip!

Art.- Nr. 10-0007185700

05 STRETCHER FOR CLICK LOCK

This stretcher is attached with a simple click on the Click Lock, and is designed for skis with a notch on the tip (e.g., Dynafit, Hagan).

Art.- Nr. 10-0007181907

SPLITBOARD

01 Z-HOOK FOR CLICK LOCK

This hook is attached with a simple click on the Click Lock, and is designed for skis with a hole at the tip (e.g., Fischer, K2, La Sportiva).

Art.- Nr. 10-0007181906

RACE

01 TOP FIX RACE

This product consists of a highly elastic 3.5mm traction cord, an elliptical ring with excentric holes, and a reinforced end, making it easy to remove without the need of gloves. TOP FIX RACE is our lightest binding system (5 g).

Art.- Nr. 10-0007182500

ACCESSORIES

TURTLE LOCK

Developed in partnership with Duraflex, this new front binding system is inspired by the RACE sector. You no longer need to remove your skis to take off your skins !

Art.- Nr. 10-0007181909

BACK FIX EASYSET

- 1 pair of Click Lock with buckle
- 1 pair of Back Fix with rivets
- 1 bag for skins
- 1 precision cutter
- 1 user manual

Size:

HISTORY

The Dufour family's history has been linked to tourism and winter sports since as early as 1870. Louis Dufour, a hotelier in Avants, Switzerland, was the first to use skis in the French-speaking part of Switzerland. The family also organized skiing and bobsledding competitions for the prestigious hosts of Montreux, Switzerland. In the 1930s Louis' son, Éric, an engineer and avid ski touring fan, developed and marketed a canvas rescue sled. Thanks to its skis and poles, the "Gaillard-Dufour" sled was able to transport injured people. Alongside his father, Éric developed the production of non-slip skins, and later adhesive skins, as well as many other mountain accessories. Around 1941, the Dufour company successfully launched rubber sole production for city and mountain shoes.

LOUIS AND OLGA DUFOUR

Assisted by his wife, Antoinette, Éric managed the company until 1988.

In 1996 their son, Guy, took up the torch. His expert knowledge of rubber gives POMOCA skins their unparalleled waterproofing. In 2011, POMOCA joined the SALEWA group, turning a new page in its history and facing new challenges.

For more than 80 years, thanks to the quality of its products and technological innovations, Swiss label POMOCA has established itself as the undisputed worldwide specialist in climbing skins. Resolutely focused on progress, POMOCA constantly develops new products—something that goes hand in hand with its ambitious and innovative concept—in order to satisfy and delight ski mountaineering enthusiasts.

SKI COMPETITION IN LES AVANTS
